A ternary CAM cell includes a main memory cell, a mask memory cell, a match line, a mask circuit, and a comparison circuit, where the main memory cell is enabled to a wordline to store data, and the mask memory cell enabled to a wordline to store mask data, data transferred to/from the main memory cell is loaded on a bitline pair, and mask data transferred to a mask memory cell is loaded on a mask bitline pair, comparison data is loaded on a comparison signal line pair, while the mask circuit is coupled between the match line and the mask memory cell to receive the comparison data, and the comparison circuit is coupled between the mask circuit and a ground voltage and includes a pair of transistors coupled to a comparison signal line pair and a pair of match transistors coupled to the data of the main memory cell such that, although the voltage level of the comparison data is lowered, a low voltage operation characteristic is excellent, the capacitive loadings of comparison signal lines are constantly maintained, and operation cycles decrease in number.
